4. Sustainability

Gateway Gardens is a green district. The preserved central park, featuring mature trees, numerous walking paths, and peaceful resting areas, is connected to the forest belt north of Bessie-Coleman-Straße. The protected oak forest southeast of the GateGourmet site provides a habitat for beetles that live in deadwood. Additionally, native and site-appropriate tree species have been replanted to replace felled trees and cleared forests.

Further sustainable benefits were achieved through the new S-Bahn connection: The planning of the new S-Bahn station provided an opportunity to mitigate the fragmentation damage in the adjacent European protected area "Schwanheimer Wald." The removal of the former railway connection within the protected area to Frankfurt Airport would not have been possible without the development of the new district.

**Gateway
Gardens**

In 2014, Gateway Gardens became the first commercial district in Germany to receive the DGNB Platinum Certification from the German Sustainable Building Council. The district is connected to the district heating network, and all buildings comply with the Energy Saving Ordinance, with some even exceeding its standards. As a designated water protection area, at least 60 percent of rainwater must infiltrate the ground on-site.

Mobility

E-mobility plays a key role in the district. Fast-charging stations with four charging points for electric vehicles are already available at the western entrance, while the northern entrance features a modern parking garage with 65 EV charging stations.

About Gateway Gardens

Gateway Gardens is the newest district of the city of Frankfurt am Main, located in close proximity to Frankfurt Airport. Its intermodal mobility network connects Gateway Gardens efficiently to destinations within the Rhine-Main region as well as to all internationally relevant locations. The available conference and hotel facilities on-site enable large-scale international town halls. Knowledge-based companies benefit from the district's proximity to numerous universities, colleges, and research institutes in the region, making Gateway Gardens an attractive location for global knowledge management.

Currently, the district is home to 30 international companies and eight hotels. By the planned completion in 2030, over 25,000 people will have Gateway Gardens as their focal point. The 35-hectare area is being developed by Gateway Gardens GmbH, a consortium consisting of Fraport AG, Groß & Partner Grundstücksentwicklungsgesellschaft, OFB Projektentwicklung, and the City of Frankfurt.
